2 Introduction

These are the release notes for updates to the MHHS System Integration Testing Functional Test Scenarios and Test cases for Cycle 3 SIT Functional test execution. This is for the February 2025 release.

3 Overview

This document communicates changes to previously issued content to address:

1. Coverage gaps mitigation; including existing IR7 gaps and new IR8 design baseline changes.
2. Test case defects raised during SIT Functional test execution.

4 Test Case Updates

This section identifies any technical changes that have been made to test cases since the previous release.

Scenario Filename	Scope Summary	New/Changed
MHHS-DEL2152 SITFTS-ST0070 LSS Reject and Default v0.8.4	<p>TC05 amended to reflect comments of PP in regard to there being no subsequent IF-021 messages after the II Run and there being no PUB-023 issued to Unmetered.</p> <p>TC04 (v0.8.3), TC05 (v0.8.3) and TC09 (v0.8.3) updated for the test approach that utilises a de-minimis count of 400 and for the test cases to not expect an IF-021 message until the SF Run (with the IF-021 being based on defaulted load shapes). The latter to work around the chronology issue caused by LSS being executed immediately before MDS and not leaving enough time for the Data Service to be able to estimate an IF-021 based on the load shapes in time for the MDS II Run.</p>	Changed
MHHS-DEL1937 SITFTS-0012 CONS COS Transfer of Reads v0.6.9	<p>TC02 (v0.6.5) updated for the IF-041 sending party (row 9) to be SDSO and to include a receiving party of SDSI.</p> <p>TC01 (v0.6.4), TC02 (v0.6.5), TC05 (v0.6.6), TC06 (v0.6.4) updated to remove the final two steps referencing the update to Settlements. This is covered by Settlements MHHS-DEL2146 SITFTS-ST0040 COS MS DS Change test case, so there is no risk of creating any coverage gap.</p>	Changed
