Operational Choreography

The Operational Choreography can be found in MHHSP_OC001_Operational_Choreography v1.0

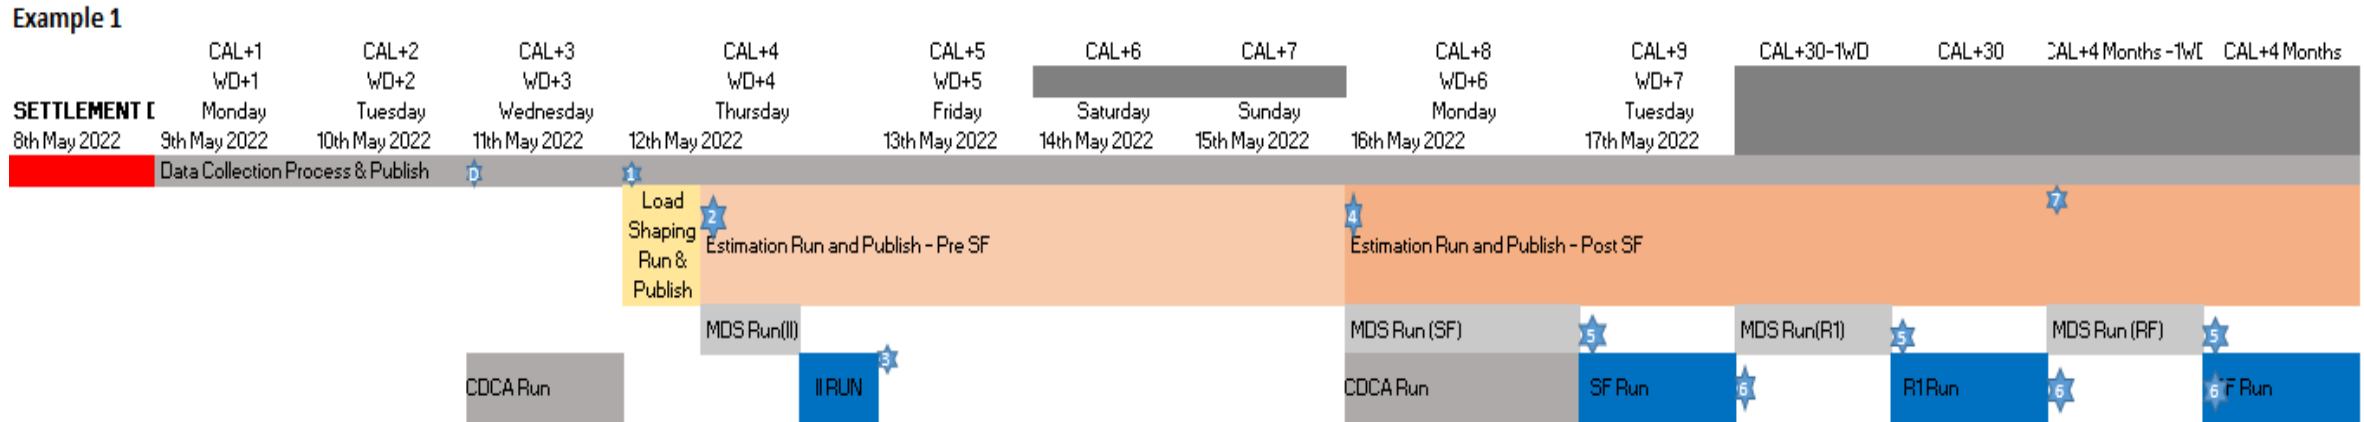

This document defines any timing constraints for the operation of the MHHS business processes where they differ from the current arrangements.

It identifies the impact of changes to Settlement Timeline informed by the processing and publication of Half Hourly consumption data provided by the Advanced Data Service, Unmetered Data Service and Smart Data Service.

Constraints are also driven by the requirement for ECS services to consume and process Half-Hourly consumption data ahead of data aggregation and settlement processing and volume allocation

Operational Choreography (2)

A visual representation of this processing sequence is as follows:

SDS to collect and publish consumption data via IF-21 immediately following D
 ADS to collect and publish consumption data via IF-21 immediately following D
 UMS to publish appropriate sets of consumption data on a daily basis

Load shaping process will incorporate all consumption data received by 00:00 on WD+4

Load Shape will have been processed and published by 12:00 on CAL+4

MDS Run and II RUN will have been completed with associated notifications by 17:00 on WD+4

Pre-SF Best Estimates will have been generated and published by Data Services by 00:00 on WD+6

MDS Runs to complete by 17:00

Settlement Runs to have been completed with associated notifications by 17:00

All actual consumption and best estimates to be provided by CAL+4 Months -1 WD
